

Ed Wallen

Ed Wallen has over 13 years of information technology innovation and leadership experience building large scale commercial products and custom enterprise systems. He has successfully designed and led implementations of numerous high volume transactional systems for two cutting-edge J2EE product companies, the U.S. Department of Defense, several U.S. civilian intelligence and enforcement agencies, and one of the world's largest hospitality firms.

Ed brought his experience in designing and building object-oriented, distributed systems to CR Software and was the chief architect behind the Titanium ORE development effort. In addition to leading CR Software's product development, he ensures the company's R&D efforts are aligned with its strategic business objectives, works closely with customers and prospects in an advisory capacity, and also writes articles and speaks at conferences advocating the use of open standards and technologies.
